

# Conturrent™ Lighting

So remarkably different we came up with a unique name describing the **Control** of **Current** for the ultimate eco-lighting solution. The results are astounding.

Conturrent is a proprietary eco-lighting system for builders and owners that is so superior to traditional fixed lighting installations that experts are saying it is a game changer for the construction industry.

Whether the project is a new home, office, commercial property, expansion or even a DIY remodeling job a Conturrent lighting system can make the task easier with a flexible high quality installation that saves more energy and more money than any other approach.

The Conturrent system uses low voltage direct current so that the costly and cumbersome materials used in traditional lighting installations are simply not required. No metal cans above the ceiling or heavy duty wiring or costly breakers in a breaker box eliminating hundreds of pounds of materials with a simple efficient system.

Whatever the parameter Conturrent sets the new standard. Fewer resources consumed, less materials shipped, fewer man hours to install, less energy consumed, no headaches and less cost.

Conturrent™ the ultimate eco-lighting solution
